

Veriflow[®]

CAMPYLOBACTER

THE POWER OF **MOLECULAR DIAGNOSTICS** IN THE PALM OF YOUR HAND[®]

INNOVATIVE MOLECULAR DETECTION FOR FOOD SAFETY MADE **SIMPLE, ACCESSIBLE, AND AFFORDABLE**

PRODUCT DESCRIPTION

Veriflow[®] Campylobacter (CA) represents a new, ultra sensitive and user-friendly class of diagnostics: Molecular Flow-Based Detection. The patented vertical flow technology allows for the sensitivity of real-time PCR tests, but with the ease of use associated with lateral flow assays. The result is an effective and rapid system that minimizes sample preparation, speeds time to results, and provides easy to interpret data for the end user.

Veriflow[®] CA can be used for the presumptive and qualitative detection of *Campylobacter* species chicken carcass rinsates with a simplified sample enrichment. Alternative grossly contaminated carcass rinsates can be tested without enrichment. The Veriflow[®] CA system eliminates the need for gel electrophoresis or fluorophore based detection of target amplification, and does not require complex data analysis. Veriflow[®] CA is the next generation in powerful diagnostic tools to help manufacturers and government regulators keep the global food supply safe.

RESULTS IN
24
HOURS

THE VERIFLOW[®] **ADVANTAGE**

- ✓ **QUICK AND EASY**
 - Reduces a traditional 72 hour detection time to **ONLY 24 hours**
 - NO microaerobic chamber required
 - NO DNA purification required
 - Small volume **1-step** enrichment for chicken carcass rinsates
- ✓ **HIGH SENSITIVITY**
 - Targets a specific gene marker in *Campylobacter* that can detect as few as 5,000 CFU/ml of sample
- ✓ **SUPERIOR INCLUSIVITY AND EXCLUSIVITY**
 - 100% inclusivity rate
 - 100% exclusivity rate
- ✓ **AFFORDABLE AND ECONOMICAL**
 - Compact thermocycler greatly reduces equipment footprint
 - Elimination of complex systems reduces capital equipment costs by as much as 80% without sacrificing operational efficiency and accuracy
 - Ease of use relieves need for highly trained personnel to run the system

INVISIBLE SENTINEL

CAMPYLOBACTER TEST PROTOCOL

ENRICH After 24 hours enrichment, transfer 500 µl sample to provided 1.5 ml tube. Heat sample for 10 minutes, then allow to cool to room temperature.

START

AMPLIFY Transfer 5 µl of heat inactivated sample into provided reagent tube. Place tube into thermocycler and run program.

90 MINUTE AMPLIFICATION

DETECT Remove reagent tube from thermocycler. Dispense reagent tube contents onto test cassette window. Wait 3 minutes and retract test cassette to reveal test results. One line indicates a negative result, two lines indicate a positive result.

ADVANTAGES OF THE FIRST VERTICAL FLOW-BASED MOLECULAR TECHNOLOGY

Advantages Over Lateral Flow Technology

- Yields results in 3 minutes post sample addition
- Eliminates back-flow reducing false positive rate
- Provides higher sensitivity resulting in lower limit of detection
- Detects molecular signatures allowing for higher specificity

Advantages Over RT-PCR Technology

- No ambiguous results – one line negative, two lines positive
- No DNA purification or cumbersome sampling steps
- Minimal Training
- Easy deployment

ITEM #	DESCRIPTION	SIZE
	Veriflow® CA Complete Test System	
IS1001	Includes: Veriflow® CA Mastermix Reagents, Veriflow® CA Cassettes, 1.5 ml Sample Boil Tubes, Enhanced Bolton Broth, 50 mL conical tubes	24 Tests
ISTC001	Invisible Sentinel Thermocycler The pre-programmed IS Thermocycler provides rapid cycling times with a small footprint.	1 Unit
	Veriflow® CA Assays	
IS1003	Includes: Veriflow® CA Mastermix Reagents, Veriflow® CA Cassettes	24 Tests
IS0301	IS Enhanced Bolton Broth	250 grams
IS0315	IS Buffered Peptone Water (IS BPW) Large	1 kg
IS0305	IS Buffered Peptone Water (IS BPW) Small	250 grams
IS0904	Veriflow®/PCR Loading Tray	1 Unit
