

Laboratory Meters

Knick >

The Laboratory pH Meter with uncompromising ease of use.

766 Laboratory pH Meter

The 766 Laboratory pH Meter is designed for standard applications in everyday lab routines. It combines practical functionality and easy operation with comprehensive safety functions.

Gaincheck

Gaincheck performs a complete instrument check. At a keystroke, it not only checks electrical characteristics, but also display and keypad. At power-on, a short check automatically tests device functions. This ensures the device operability, as part of quality management to ISO 9000 and GLP.

Sensoface

checks the electrode and provides information on the electrode condition. Zero point, slope, response time, and glass impedance of the electrode are evaluated.

Trueline

delivers a calibrated analog recorder signal, of course electrically isolated. This provides you with a true pH signal, calibrated for the electrode and without disturbing quantizing levels, permitting undistorted recording of pH curves.

Calimatic

automatically recognizes the right buffer. It allows calibration at the stroke of a key, providing ease of use and – above all – safety. You simply immerse the electrode in two buffers of the selected set, no matter which one you take first, and press the cal key. The meter automatically recognizes the buffer and calibrates itself. It does not matter which buffer solution is taken first.

EMC

EMC design protects the meter from electromagnetic interferences, ensuring reliable measurement results even under unfavorable conditions.

Easy operation with five keys

Even with its comprehensive safety functions, the Model 766 remains easy to operate. Just five keys give access to all functions you require for easy and precise routine measurements.

Temperature compensation manual or automatic

Temperature is automatically compensated. A pH/Pt 1000 electrode detects the temperature and the Model 766 automatically calculates it into the measured value. Of course, you can also measure the temperature using

a separate sensor or enter it manually.

Easy-to-read LED display for pH and temperature

The large, bright 14-segment LED display for alphanumeric characters allows simultaneous readout of pH/mV and temperature.

Safe and robust enclosure

The well-designed enclosure has proved successful in practical use. A waterproof membrane keyboard and drain grooves protect the meter from moisture. The robust, stainless steel covered enclosure resists even strong mechanical stress.

Warranty
3 years!

Defects occurring within 3 years from delivery date shall be remedied free of charge at our plant (carriage and insurance paid by sender).

■ Gaincheck device self-test

For the self test, the measuring circuit is connected to the recorder output.

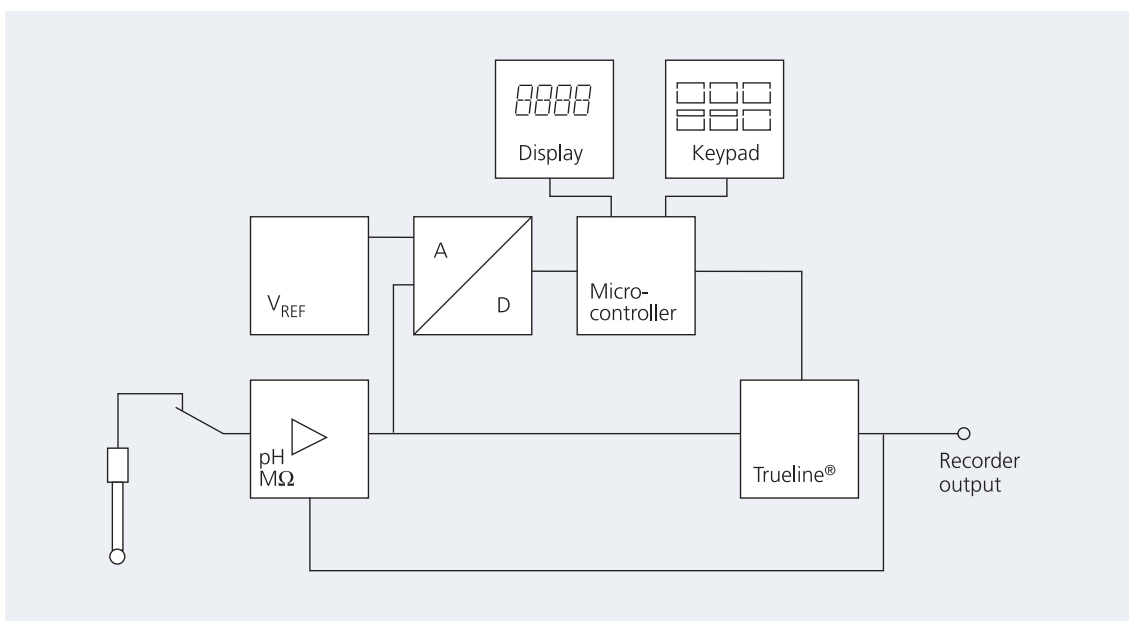

The microcontroller sends defined voltage steps to the recorder output. These are measured with the measuring circuit and the A/D

and compared with a highly accurate reference voltage.

This ensures reliable checking of the signal path. In addition, the Model 766 tests all Sensoface criteria, all memories, the display, and the keypad.

Gaincheck allows you to check your instrument's operability for quality management to ISO 9000 and GLP.

Gaincheck is only available from Knick.

766 Laboratory pH Meter

■ Specifications

Laboratory pH Meter 766

Equipment	Meter with power cord, without electrode
Ranges	pH: -2.00 ... +16.00 / mV: -1999 ... +1999 / °C: -50.0 ... +150.0
Display	Alphanumeric 2 x 4 digits, 14-segment LED, character height 13 mm; Measurement symbols pH/mV/°C/man, 3 Sensoface icons inform on the condition of electrode and measuring equipment (GLP) ³⁾
Measuring cycle	Approx. 1.5/sec
Accuracy ¹⁾	pH: <0.01 / mV: <0.1 % ±0.3 mV / °C: <0.3 K
Input	DIN 19262
Input resistance	>1 x 10 ¹² Ohm
Input current (20 °C) ²⁾	< 1 x 10 ⁻¹² A
Temperature coefficient	<0.1 count/K
Electrode standardization	Calimatic automatic calibration and buffer recognition (German patent 29 37 227), For buffer sets, see Page 76, permitted calibration ranges: Zero: pH 6 ... 8 Slope: 47 ... 61 mV/pH (25 °C)
Electrode monitoring	Sensoface evaluates zero, slope, response time, and glass impedance of the electrode, electrode condition displayed as good / average / poor, can be disabled
Device self-test Gaincheck	Displays all Sensoface criteria and electrode data, tests measurement electronics including memories, measured value processing, and recorder output, checks display and keypad during diagnostics, automatic short check at power-on
Temperature compensation	Pt 1000, automatic selection Manual: 0.0 ... +100.0 °C ^{*)}
Recorder output ^{*)} Truline	pH-compensated, no quantizing levels mV: 1 mV/mV pH: 100 mV/pH Automatic matching to measured value setting
Calibration data storage	Automatic storage of calibration data and settings, self-contained
Data retention	>10 years (EEPROM)
Recorder output ^{*)}	Galvanically isolated mV: 1 mV/mV / pH: 100 mV/pH / °C: 10 mV/°C
Protection against electrical shock	Protective separation of all extra-low-voltage circuits against power supply to DIN VDE 0100 Part 410 as defined in DIN VDE 0106 Part 101 and according to EN 61010 Part 1

^{*)} User defined ¹⁾ ±1 count ²⁾ 45 °C: factor 10 ³⁾ Good Laboratory Practice

Combination pH electrodes for lab and field units

The SE 100 N and SE 103 N electrodes with a glass body are combination electrodes for standard applications in the lab. The Model SE 100 N has an integrated Pt 1000 temperature probe. The Model SE 103 N with its high-temperature dissipation system is suitable for measurements in media up to 100 °C.

For use in rougher environments, Knick offers the SE 101 N electrode with plastic body. It is also equipped with an integrated Pt 1000 temperature probe. In addition, Knick also offers the SE 104 N puncture electrode. This thin, gel-filled combination electrode is particularly robust and insensitive to pollution. Therefore, it is suited especially for measurements in semi-solid substances such as meat or cheese.

A special feature of the SE 106 N electrode is its ground diaphragm, which achieves a comparatively large, continuous electrolyte flow. The electrode is a good choice when it comes to prevent junction blocking by solids or proteins, minimize charge effects caused by surfactants or dispersions, for example, or measuring in low-ion solutions. The electrode can also be used in high-temperature and/or high-pH solutions.

		Order No.
	pH/Pt 1000-combination electrode (Glass body, ground diaphragm, length 165 mm)	SE 106 N

■ Product line Accessories

		Order No.
	Attachable stand Besides the immersion stirrer, the attachable stand can hold three sensors of any kind. The adjustable stops prevent damage of sensor and beaker glass. Time-consuming adjustment during sample change has been eliminated. An integrated cable duct does away with the "spaghetti cables" on your benchtop. For immersion stirrer and three sensors. Fixed directly to the meter.	ZU 6954
	Immersion stirrer The immersion stirrer reduces electrode response time for measurement and calibration. Precision measurements to DIN 19268 even require stirring. To prevent splattering of test liquid, the stirrer automatically stops as the carriage moves up. The stirrer is supplied via the ZU 6956 plug-in power pack.	ZU 6955
	Plug-in power pack For immersion stirrer	ZU 6956
